

# AI Architect Program

Orchestrate. Connect. Deploy.  
Build End-to-End AI Systems

250+ Hours | Online | Low Code Friendly  
6 Months of Live Sessions | 6 Months of Guided Execution

# Why This Program Exists

Most people are learning AI tools. Very few know how to design complete AI systems.

Companies now need people who can connect AI with workflows, data, apps, agents, and business operations. The AI Architect Program exists to create builders who can plan, architect, and deploy real AI systems for businesses.

## The Problem

- Watch AI tutorials. Try a tool for a day.
- Get distracted by the next tool.
- Build nothing. Ship nothing. Earn nothing.
- Have no portfolio. No proof. No confidence.

## The ONROL Difference

- Build complete, connected AI systems from scratch.
- Deploy real products companies actually pay for.
- Graduate with 15+ projects, a live portfolio, and a career roadmap.
- Go from AI user to AI Architect — not just in name, but in proof.

## About ONROL

ONROL is an AI Execution School focused on practical learning and real project building. ONROL does not teach AI as theory alone — it trains learners to build usable AI systems.

ONROL's approach is built around practical outputs, portfolio proof, and market-ready AI capability. Every module produces something deployable. Every week adds to a portfolio that replaces a resume.

# Who Is This Program For?

The AI Architect Program is built for those who are ready to go beyond basics. You understand AI. Now it is time to build with it at a systems level.

People who succeed in this program practice regularly, complete every project, ask doubts, and enjoy building systems.

# What You Will Walk Away With

By the end of the program, you will have built and deployed 15+ real-world AI projects. These are not exercises. Each one is something businesses pay for and each one becomes a piece of your portfolio.

01

## Full-Stack AI Applications

Frontend, backend, database, authentication, and deployment complete, live, working products.

02

## Advanced RAG Systems

Document-based AI assistants that retrieve, reason, and respond from real business data.

03

## Multi-Agent AI Workflows

Autonomous agent teams that research, plan, generate, and execute complex tasks end-to-end.

04

## Deployed Portfolio on GitHub

Every project is live, documented, and shareable — your proof replaces your resume.

05

## Enterprise AI Architecture

System blueprints connecting UI, database, AI models, APIs, automation, and agents as one coherent system.

06

## AI Orchestrator Certification

ONROL certification and career transformation roadmap recognising your capability to design and deploy AI systems.

*"AI Architect Program makes you execution-ready to build and deploy real AI systems for real businesses."*

# Your Learning Journey — 20 Modules

The program is structured across 20 weeks. Each module builds on the previous. By the end of each module, you will have produced concrete deliverables and shipped them publicly.

| Week                                        | Module Topic                                     | What You Will Build/Achieve                                      |
|---------------------------------------------|--------------------------------------------------|------------------------------------------------------------------|
| PHASE 1 — TECHNICAL FOUNDATIONS (Weeks 1–4) |                                                  |                                                                  |
| 01                                          | Web Foundations: HTML, CSS, JavaScript, React    | Portfolio website, responsive UI, React dashboard                |
| 02                                          | Python Programming & Libraries                   | Data cleaning scripts, automation utilities, analytics notebooks |
| 03                                          | Data Visualisation, Web Scraping, SQL & Power BI | Sales dashboard, KPI dashboard, Product scraper                  |
| 04                                          | Statistics for Data Science                      | Statistical analysis workbook, A/B testing project               |

| Week                                 | Module Topic                                 | What You Will Build/Achieve                                              |
|--------------------------------------|----------------------------------------------|--------------------------------------------------------------------------|
| PHASE 2 — AI CORE SKILLS (Weeks 5–8) |                                              |                                                                          |
| 05                                   | AI Foundations, Prompting & LLM Ecosystem    | Prompt library, local AI chatbot, structured AI assistants               |
| 06                                   | RAG Basics, Diffusion Models & Generative AI | Document Q&A assistant, AI avatar, marketing creatives                   |
| 07                                   | Automation & Workflow Systems                | Lead automation, WhatsApp bot, Google Workspace integrations             |
| 08                                   | Chatbots, AI Agents & MCP                    | Customer support chatbot, multi-agent research system, custom MCP server |

| Week                                  | Module Topic                            | What You Will Build/Achieve                                              |
|---------------------------------------|-----------------------------------------|--------------------------------------------------------------------------|
| PHASE 3 — BUILD & DEPLOY (Weeks 9–11) |                                         |                                                                          |
| 09                                    | Vibe Coding & AI-Assisted Development   | Full-stack app, user management system, SaaS MVP                         |
| 10                                    | App Development & Claude Ecosystem      | Android app, desktop software, Claude-powered AI workflows               |
| 11                                    | Deployment, Optimisation & Monetisation | Live deployed product on Vercel, GitHub portfolio, revenue-ready website |

| Week                                        | Module Topic                                            | What You Will Build/Achieve                                             |
|---------------------------------------------|---------------------------------------------------------|-------------------------------------------------------------------------|
| PHASE 4 — ADVANCED AI SYSTEMS (Weeks 12–15) |                                                         |                                                                         |
| 12                                          | Advanced RAG & Visual Storytelling                      | Enterprise knowledge system, investor-ready AI presentation             |
| 13                                          | AI System Architecture                                  | AI system blueprint, multi-stack platform, self-hosted automation       |
| 14                                          | AI Content, Media & Personal Branding Systems           | Content pipeline, lead generation funnel, LinkedIn and portfolio assets |
| 15                                          | AI Orchestration, Internal Tools & Production Readiness | Production AI system, internal team productivity platform               |

| Week                                                 | Module Topic                                         | What You Will Build/Achieve                                               |
|------------------------------------------------------|------------------------------------------------------|---------------------------------------------------------------------------|
| PHASE 5 — GROWTH, MARKETING & CAPSTONE (Weeks 16–20) |                                                      |                                                                           |
| 16                                                   | Final Capstone, Portfolio & Demo Day                 | End-to-end AI product, technical documentation, live demo presentation    |
| 17                                                   | Digital Marketing Foundations & AI Strategy          | Marketing strategy framework, high-converting landing page                |
| 18                                                   | Lead Generation, SEO & Content Marketing             | SEO strategy, lead generation funnel, content marketing calendar          |
| 19                                                   | Social Media Marketing & AI Creative Production      | Social media content engine, reels, 30-day content calendar               |
| 20                                                   | Paid Ads, Analytics, Automation & Marketing Capstone | End-to-end marketing automation system, ad campaigns, analytics dashboard |

+ 5 Bonus Sessions: 3D Game Generation, Stack Alternatives, AI SEO, Google Ecosystem, Spline 3D & Advanced Design Tools

+ 20 Masterclasses: Deep-dive clinics on Web UI, Python, Data, Statistics, Prompt Engineering, and more

# Projects You Will Build (15+ Real Projects)

Every project is deployable, shareable, and portfolio-ready. These are not toy exercises — they are systems businesses use and pay for

## 1. RAG-Powered Business Assistant

An AI assistant trained on company documents, PDFs, and knowledge bases. Answers questions, retrieves data, and takes actions.

## 2. Full-Stack AI Web Application

Complete frontend, backend, database, authentication, and AI layer — deployed live on Vercel with a GitHub portfolio page.

## 3. Multi-Agent Research System

A team of AI agents that searches, summarises, compares, and produces structured reports autonomously.

## 4. Automation Workflow Platform

Lead capture, WhatsApp follow-ups, Gmail automation, Google Sheets updates — all connected in n8n without writing a single line of traditional code.

## 5. AI Content & Lead Generation Engine

A complete content pipeline that generates blogs, reels, emails, captions, and social posts from a single brief — plus lead follow-up automation.

## 6. Android & Desktop AI Application

A working mobile app and desktop software built using Claude Code, Android Studio, and Flutter — with AI capabilities embedded.

## 7. Enterprise AI Architecture Blueprint

A full system design covering UI, database, AI model layer, APIs, agents, and deployment — documented and presented for a real business use case.

## 8. Marketing Automation & Analytics System

Paid ads, SEO dashboard, social media content calendar, retargeting workflows, and a GA4 analytics setup — all connected and automated.

*"By end of the program, you will have built  
and publicly shipped complete AI systems. Your work is your credential"*

## The Builder Stack

Rather than touching every tool and mastering none, the program focuses on a core stack that covers 80% of what you need as an AI Architect. Each is industry-standard.

# The Guided Execution Phase

## 6 Months Post-Class

After 6 months of live sessions, learners enter a 6-month guided execution phase. This is not passive access. It is structured support designed to ensure every learner completes their portfolio and reaches their goal.

### What You Get

- Project completion support — guidance on finishing every build
- Portfolio review and improvement sessions
- Concept reinforcement for topics that need revisiting
- Product building help — from idea to shipped product
- Career and placement direction throughout
- Access to LMS, recordings, and resources for 1 full year

### Why It Matters

Most programs end when classes end. Learning stops. Projects get abandoned. ONROL's guided execution phase exists because the real work begins after class.

This is where learners go from having skills to having a portfolio. From having a portfolio to landing opportunities. From having a certificate to being genuinely capable.

## Your Investment

The AI Architect Program is priced to reflect the depth of value delivered — 20 modules, 250+ hours of training, 6 months of live sessions, 6 months of guided execution, and a complete AI portfolio. We follow a flat pricing policy. No discounts, no upsells, no surprise charges. Every builder in the cohort pays the same fee.

### PROGRAM FEE

**₹1,50,000**

ALL-INCLUSIVE • FLAT PRICING

## Your Investment

- 6 months of live online sessions (250+ hours)
- 6 months of guided execution and project support
- 1 year of access to the LMS and all recordings
- Access to the exclusive ONROL community
- Templates, prompts, and workflow libraries
- Personalized portfolio review
- AI Orchestrator Certification + Builder Badge
- Placement assistance and career direction
- Eligibility for future cohorts and advanced programs

## What Is Not Included

- Paid subscriptions to third-party tools — most have free tiers sufficient for the program (estimated optional cost: Rs 0 to Rs 2,000 if you choose paid tiers)
- Domain and hosting for personal portfolio (Rs 500 to Rs 1,500 if you choose to purchase)

## Program Logistics

### Format

Online —  
Live Sessions

### Daily Commitment

1 to 2 hours

### Language

English

### Platform

ONROL LMS

# Frequently Asked Questions

## Is this program for complete beginners?

Not ideally. Complete beginners should start with the AI Generalist Program first. AI Architect is for learners who already understand AI basics and are ready to build systems.

## Do I need coding experience?

Basic coding interest is helpful. You do not need to be a developer. The program uses low-code and AI-assisted tools extensively, but learners should be comfortable working with apps, APIs, databases, and deployment.

## I am a working professional. Can I manage 1–2 hours a day?

Yes. The program is engineered for this exact commitment level. Live sessions are recorded for replay. Many of the most capable builders in ONROL cohorts have full-time jobs.

## Can I join directly without doing the AI Generalist Program?

Yes, if you already have a working understanding of AI tools and are comfortable with coding-related learning. The counselling team will help assess readiness.

## What happens during the Guided Execution phase?

After 6 months of live classes, learners enter a structured 6-month support phase. This includes project completion guidance, portfolio building sessions, concept reinforcement, and career direction.

## Is a job guaranteed?

ONROL provides skills, projects, portfolio support, and placement assistance. Final placement outcomes depend on learner effort, consistency, and market opportunities. What ONROL guarantees is a rigorous, execution-focused program.

## When does the next cohort start?

Cohorts run regularly throughout the year. Visit [www.onrol.in](http://www.onrol.in) or contact the team at 96093 12345 for current dates and availability.
